 - Analytics
 - What to measure
 - How to measure
 - Why to measure
 - The use of dashboards for these analytics
- Annamarie
 - Data Quality Management
 - Reporting
 - Academic Programme Tracking System

introduction

- The purpose of this section is to provide source for discussion on reporting and monitoring of LNQs.
- This is not a case study but rather an investigation into the possibilities of reporting in this area.
- Data from UJ are used for the purpose of providing a platform for the investigation and is only a **sample** data set.
- The assumption used is that the components included in the reports are supported by available data.
 - As we will see this is the main limitation with effective reporting in this area

procedure

- *Extracted a sample data set from one of the faculties at UJ, details of these programmes are irrelevant and grouped for this study*
 - *Diploma type - whole CEP programme*
 - *Short learning programme*
 - *Short course*
- *Using available data additional measures were calculated and included in the dataset:*

| | | |
|--|---------------------------|---------------------------|
| Applicant Admission Rate | Exam Admission Rate | Income per student |
| Applicant Registration Rate | Subject Cancellation Rate | Income per passed student |
| Registration/Headcount Ratio (Registrations per Student) | Subject Fail Rate | Income per credit |
| Applicant/Application Ratio (Applications per Applicant) | Subject Pass Rate | Income per subject |
| Subject Load | Subject Repeater Rate | Income per passed subject |
| Credit Load | Subject Distinction Rate | Academic Ranking |
| | Exam Absence Rate | Financial Ranking |
| | | Quality Ranking |

procedure

- *Dashboards representing:*
 - *Applications, Admissions and Registrations*
 - *Registration Profiles*
 - *Subject Analytics*
 - *Finance and Analytic Ratios*
 - *Ranking Analytics*

presentation

- *Applications, Admissions and Registrations*
 - Note that some measures are very different from normal reporting
 - Headcount vs Registrations
 - Comparative analytics
 - Short courses
 - Short learning programmes
 - CEP Diploma type whole programmes
 - Note phasing in and out
 - Attempt to describe all aspects of the applications, admissions and registration process
 - Dependent on the quality of the data

presentation

- *Subject Analytics*
 - Attempt to describe all aspects of the subject data, additional calculated fields done
 - Average Marks, Exam Absence and Attrition
 - Subject load, Credit Load, Success Rates, etc
 - Detailed and 'Point in Time' analytics
 - Report in quantum (number) and in ratios (%)
 - Current and trend analysis
 - Results will depend markedly on the institutions available data
 - Dependent on completion and quality of the data

presentation

- *Finance and ratios*
 - Attempt to describe the financial component in relation to other important contributions (academic, enrolment, risk, attrition, etc)
 - Registration and Subject enrolment patterns
 - Income per student and per subject
 - Measures in relation to drivers of success
 - Comparative analytics as visualisations
 - Context of the relative contributions
 - Scatter plot options to further contextualise the data
 - Results to be used in further ranking analytics
 - Dependent on the identification of relevant measures

presentation

- *Ranking Analytics*
 - Attempt to describe important contributions to the institution
 - Academic Ranking
 - Finance Ranking
 - Quality Ranking
 - Visualise these contributions in quadrant analytics
 - Address the issue of defining the financial aspect in relation to others

saair

Southern African Association for Institutional Research

observations

- *Various Rankings*
 - Information overload?
 - How valuable are the contextual rankings?
 - How plausible is the measure of Quality?
 - How else do we consider Financial and Quality aspects?
 - How do we consider the Strategic Value of these programmes?

observations

- Programmes Not for Formal Qualifications can be reported and monitored much the same as mainstream programmes **if the data elements exist and a process is in place to populate the data accurately.**
- We may want to take the analytics a step further to consider the relative contributions in a number of important areas
- These will depend on the analytic direction of the institution
- The aim is to address the issue of evaluating the **financial contribution in relation to other aspects** – mainly quality tuition

Thank you ...
